3D SymbolDesigner for SmartPlant[®] 3D

Features:

- Fast design of equipment, HVAC and piping symbols
- Open architecture
- Easy Setup
- Powerful bulkload automation to create and load SmartPlant 3D bulkload sheets

Benefits:

- Improves productivity through reuse of design data
- No programming knowledge necessary

3D SymbolDesigner

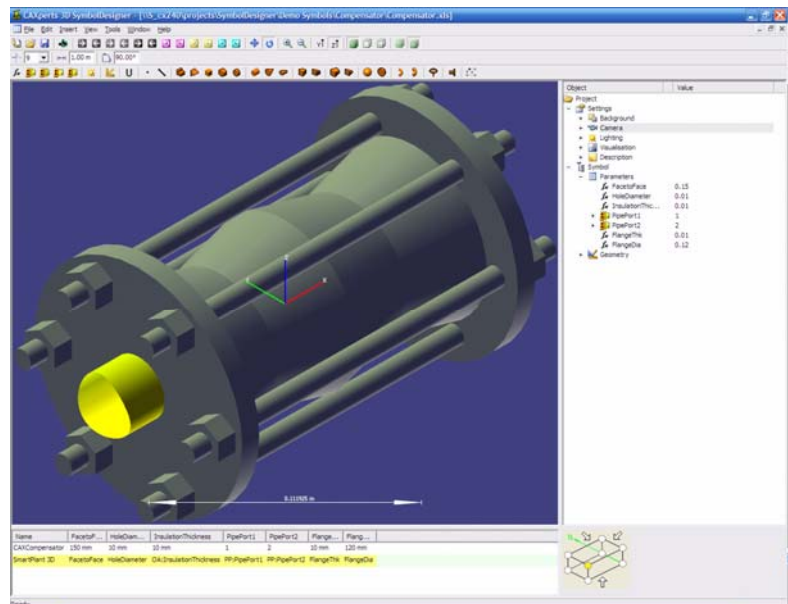

Customers benefit from the ease-of-use and power available from the 3D SymbolDesigner suite of products: The 3D SymbolDesigner main program provides a revolutionary design environment for equipment, HVAC, piping and custom instrument symbols. The GeometryExtractor utility lets users extract EQP geometry data from Microstation DGN files and stores it in an open file format.

3D SymbolDesigner

3D SymbolDesigner is CAXpert's flagship solution for symbol development. It enables customers to graphically author their symbols for plant design software like Intergraph SmartPlant 3D without programming knowledge.

3D SymbolDesigner is designed to meet customer needs in symbol development activities including an interactive graphical design environment, import functionality from sources like Microstation DGN files and export to a variety of data formats (e.g. VisualBasic projects and Excel bulkload sheets for Intergraph® SmartPlant 3D).

3D SymbolDesigner is based on an open, scalable architecture. Symbol data and symbol variants are stored in Excel files and can be edited with Microsoft® Office or external automation software. By enabling enterprises to reuse symbol designs and accelerate development cycles, 3D SymbolDesigner helps companies speed up their responses to market needs.

3D SymbolDesigner

3D SymbolDesigner can help shorten development time, reduce testing costs, improve product quality, increase profitability, and reduce time to market.

3D SymbolDesigner is the most powerful and flexible solution for providing equipment, HVAC, piping and custom instruments symbols for Intergraph SmartPlant 3D.
