

PlantReModeller

The easy way to import legacy models into Smart 3D

PlantReModeller speeds up the process of remodeling data from legacy systems such as Intergraph PDS to make an intelligent model available within SmartPlant 3D.

Fast data import

Import and delivery of data are faster than with any other available software or manual remodeling.

Full control

Any necessary changes during the data import and remodeling process are entirely left in control of the SmartPlant designer.

Complete and correct

An effective and complete data import process is ensured, including graphics and metadata.

Speed up data import into SmartPlant 3D

- Instant availability
- No special preparation of data necessary
- Significant time and cost savings
- Time-saver in engineering projects
- High level of automation to import data

For use with:

- Intergraph (Smart 3D, PDS)

Easy migration of PDS legacy data

Focus on your engineering work instead of spending time on the import of data. PlantReModeller will save time in your engineering projects and provides you with a reliable and robust migration of legacy data. PlantReModeller uses a high level of automation to import data ("one-button solution").
