

# ReviewGenerator – simplify design review meetings for Intergraph PDS®

## Introduction:

The CAXperts **ReviewGenerator** is a freeware tool for fast and simple production of design review meetings. In a well-known clear representation of the disciplines, areas and models all relevant components can be selected for viewing in SmartPlant Review and opened afterwards.

## Pre-requisite software:

Prerequisite for this is a configured PDS project with a valid licence (for DRV file generation).

## Simple to use:

The setup is simple and allows the user to select the PDS project. Once selected the structure of the project is displayed clearly in a tree view. The tree view is then used to select the models that are of interest.

## SmartPlant Review:

The **ReviewGenerator** produces a DRI file as a collection of all containing files, by simple indication of the store folder and file name in the appropriate text field. Beyond that optionally DRV files of the individual components can be generated by activation (default) of the check box 'Generate DRV-files'.

If required, the check box 'Open in SmartPlant Review' can be selected. SmartPlant Review will be opened, displaying your selected items.

## Benefit:

Simple and quick process to generate DRI and DRV files from PDS for use in SmartPlant Review.
