Subject: CAXperts GmbH launches 3D DataManager Reporter utility that will greatly improve Owner Operator and EPC engineering management productivity

We are very pleased to announce the launch of **3D DataManager Reporter** for Intergraph® SmartPlant® 3D. This new utility will be part of CAXperts' latest suite of dedicated 3D data management tools for visualisation, reporting and, ultimately updating projects' 3D data. Later this year in Q2 we will introduce **3D Data Manager Professional** to write back data that was edited in **3D Data Manager Reporter**.

3D DataManager Reporter will be an essential companion utility for all SmartPlant® 3D deployments providing easy access to all the 3D project data for visualisation and reporting. **3D DataManager Reporter** is a Microsoft Windows based application that does not require any CAD-specialist to define the required queries and reports out of Intergraph's SmartPlant®3D. **3D DataManager Reporter** decodes and simplifies data during the extraction into one easy to use table per task (discipline).

3D DataManager Reporter has additional features for easy reporting of data with CAXperts' unique drag and drop technology (patent pending) allowing everybody to create the required add hoc queries without database DB relations knowledge. All queries are done without SmartPlant®3D installation.

3D DataManager Reporter offline database (Microsoft® Access) will allow portability of SmartPlant® 3D data on a USB drive or simple project share with all stakeholders **3D DataManager Reporter** will be the simplest method to visualise, manipulate and validate SmartPlant®3D project data. Ultimately, CAXperts **3D DataManager Professional** will write back this modified information back into SmartPlant® 3D.

Peter Schlegel, CAXperts managing partner in Ismaning Germany is proud to introduce such a powerful, yet so simple to use 3D data management utility.

"**3D DataManager Reporter** will be particularly useful for all those requiring 3D data validation and reporting" says **Peter Schlegel**. For **Anton Schreibmueller, CAXperts** Managing Director in Asia Pacific, **3D DataManager Reporter** will be a great project data validation utility and the first of many more CAXperts 3D related utilities!
