

Complex reporting made easy

## UniversalReporter

Complex reporting made easy

UniversalReporter provides a complete solution for reporting and supports different engineering systems. It is simple to use and allows you to also modify data and write it back to the P&ID or Smart 3D database.

### Easy to use

Empower your team to easily create complex report templates or to extract ad-hoc reports.

### Need to change data?

You can modify P&ID or Smart 3D data directly in the GUI of UniversalReporter or Import from Excel.

### All data in one place

Generate composite reports across multiple applications and compare them.

### Easy engineering data reports

- Gain important insight into your data
- Use data from all systems
- Increase productivity
- Reduce man-hours
- Complete reporting solution
- Time & cost saving

For use with:

- Intergraph Smart 3D (P&ID, Electrical, Instrumentation, 3D, Materials, PDS)
- AVEVA (PDMS)
- Microsoft (Excel, Access)

### Built to resolve key issues of reporting and data consolidation

Mostly, several systems are used for a single engineering project. Therefore, it is difficult to generate composite and comprehensive reports. Sometimes it even makes it impossible to verify changes in engineering content between two specific dates.

UniversalReporter is the quick and easy way to get the individual reports you need for your engineering projects. All you need are basic Excel skills. Even for complex requirements. Also when data checking and data consolidation is involved, UniversalReporter is the best choice to perform these tasks smoothly.
